

Destination Moon

1. Print the template onto cardboard and decorate. We've used pencils, glitter and wiggle eyes. You could also use markers and paint. Allow to dry if needed.
2. When complete, cut along the dotted lines - don't forget the line between Earth and the Moon within the picture. You may need a hobby knife to cut this line. Adult supervision is recommended when using scissors and knives.
3. Use a permanent marker to colour a giant popstick black, then glue the rocket onto the end. Allow to dry.
4. Push the other end of the popstick through the slit in the card so the bottom sticks slightly out and the rocket is seen at the top.
5. Move the stick backwards and forwards to fly the rocket to the moon!
